

Circular Pipe Flange with Mounting Holes

This circular flange is designed for connecting pipes, valves, pumps, or other equipment to form a piping system. It features multiple evenly spaced mounting holes for secure and robust connections in industrial applications.

Product Overview

Industrial Circular Pipe Flange

This circular pipe flange is engineered for robust industrial applications, providing a secure connection point for pipes, valves, and pumps. Constructed from a durable metallic material, likely brass or bronze, it features a machined finish and multiple evenly spaced mounting holes for high-integrity fastening. Its design ensures reliable performance in demanding piping systems where structural stability is paramount.

Technical Specifications

Design Features

- Circular geometry
- Smooth inner diameter
- Machined finish
- Substantial thickness for high durability

Typical Use Cases

Piping Systems • Valve Connection • Pump Integration

Material Type	Metallic, Brass/Bronze Alloy
Mounting Holes	Multiple evenly spaced holes
