

Circular Plastic Injection Mould

This circular plastic injection mould is designed for creating cylindrical or ring-shaped objects. It is made from durable, injection-molded plastic, ensuring suitability for repeated use in industrial and manufacturing processes.

Product Overview

High-Precision Circular Injection Mould

This circular plastic injection mould is engineered for the precise manufacturing of cylindrical or ring-shaped components. Featuring a sophisticated design with a stepped outer profile, integrated notches, and ridges, it ensures structural integrity and consistent output for industrial applications. The durable construction supports high-volume manufacturing environments, making it a reliable tool for repeated production cycles.

Technical Specifications

Key Features

- Stepped outer profile
- Integrated notches
- Ridged exterior design

Shape	Circular / Cylindrical
Surface Finish	Smooth Interior, Stepped Exterior

Usage Metrics

Application

Industrial Manufacturing • Injection Molding

Durability

100 %
Cycle Suitability
