

Circular Saw Blades

High-performance circular saw blades are designed for precision cutting. They are available in various sizes and materials, including high-speed steel and carbide-tipped options.

Product Overview

Precision Circular Saw Blades

These high-performance circular saw blades are engineered for industrial and professional applications where accuracy and clean cuts are paramount. Designed for durability and extended service life, they are suitable for cutting a versatile range of materials including metal, wood, and plastics. Available in multiple configurations, including high-speed steel and carbide-tipped options, these blades provide reliable performance for demanding cutting tasks.

Technical Specifications

Suitable Materials

- Metal
- Wood
- Plastics

Application Type

Industrial • Professional

Blade Material Options

High-Speed Steel, Carbide-Tipped
