

Circular Sealing Rings

These circular rings are designed to provide a seal between components. The rings can also be used to maintain spacing within mechanical assemblies.

Product Overview

High-Performance Sealing Rings

These circular sealing rings are engineered for precision mechanical applications, offering reliable performance as seals or spacers. Constructed from a durable elastomeric material, they feature a smooth outer profile and a specialized stepped inner design to ensure optimal fit and function. Ideal for reducing friction and maintaining component spacing in diverse industrial environments.

Technical Specifications

Design Features

- Circular profile
- Smooth outer edge
- Stepped inner design

Primary Applications

Sealing • Spacing • Friction Reduction

Material Composition

Elastomer, Rubber-like
