

Circular White Plastic Tool with Central Metallic Component

This circular tool is made of white plastic or resin and includes a central handle. A metallic button or component is located at the center of the handle.

Product Overview

Precision Circular Tooling Component

This specialized circular tool is designed for precision applications, featuring a durable white plastic or resin construction. It incorporates a central handle-like structure equipped with a metallic button component, facilitating ease of use. The hollow circular design is engineered for guiding or containing processes, making it well-suited for controlled environments such as laboratories or industrial assembly lines.

Physical Characteristics

Design Features

- Circular hollow tube design
- Central handle structure
- Integrated metallic button
- Dual-connector support system

Material Composition

White Plastic, Resin, Metallic Component

Specialized Application

Yes
