

City Bus Auto Engine

This auto engine is specifically designed for city buses. It provides the power needed for efficient and reliable urban transportation.

Overview

Engineered for Urban Transit

This modern city bus engine is specifically designed to meet the rigorous demands of public transportation. Featuring a low-floor architecture for enhanced passenger accessibility and a layout optimized for efficient urban travel, it ensures reliable performance in high-frequency stop-and-go environments. Its robust construction supports both passenger comfort and operational longevity.

Key Metrics

Integrated Systems

Electronic Route Display, Low-Floor Chassis Compatible

Design Features

Design Specifications

- Low-floor design for easy accessibility
- Large windows for optimal passenger visibility
- Modern aesthetic with geometric exterior graphics
- Optimized for urban public transport
