

Clamp-On Ultrasonic Flowmeter

This ultrasonic flowmeter allows for easy installation and is suitable for various liquid flow measurements. It provides precise measurements, is easy to maintain, and has multiple output options with IP68 protection available.

Product Overview

Non-Invasive Flow Measurement

The Clamp-On Ultrasonic Flowmeter provides a professional, non-invasive solution for measuring liquid flow in closed pipes. By utilizing ultrasonic transducers clamped to the pipe exterior, it eliminates the need for pipe modifications or process interruptions. This versatile system is ideal for industrial applications including water treatment, chemical processing, and HVAC systems.

Key Features

Core Advantages

- Easy installation with clamp-on design
- Non-invasive measurement
- Low maintenance requirements
- Suitable for various liquid types
- Multi-output configurations available

Ingress Protection

IP68 Optional
