

Class 150 Stainless Steel Ball Valve

This stainless steel ball valve is engineered for reliable shutoff in diverse industrial applications. Its robust design ensures good tightness when used in oil fields, chemical plants, coal mines, and environmental protection systems.

Overview

Industrial Stainless Steel Ball Valve

This high-performance Class 150 flanged ball valve is engineered for demanding industrial environments. Constructed from premium CF8/CF8M stainless steel, it provides exceptional corrosion resistance and durability in process control, oil, gas, and water treatment applications. The full-port design minimizes pressure drop, ensuring optimal flow efficiency during operation.

Technical Specifications

Key Features

- Full port design
- Flanged end connections
- Manual handwheel operation
- Corrosion-resistant stainless steel body

Performance Ratings

150 lb

Pressure Class

Pressure Class	Class 150 (150lb)
Material Grades	CF8, CF8M
