

Clean Water Peripheral Pump

This peripheral pump is designed for transferring clean water and non-corrosive liquids. It features a robust construction for reliable performance in various applications, including domestic water supply, irrigation, and pressure boosting systems.

Overview

Clean Water Peripheral Pump

This peripheral pump is engineered for the efficient transfer of clean water and non-corrosive liquids. Its robust construction ensures reliable performance for domestic water supply, irrigation, and pressure boosting systems. The compact design facilitates easy installation while maintaining consistent flow rates and pressure for demanding applications.

Technical Specifications

Performance Features

- Compact design
- Consistent flow rate
- Reliable pressure boosting
- Robust construction

Application Compatibility	Clean Water, Non-corrosive Liquids
Model ID	TKM60
