Product Overview

Professional Clean Water Management

This submersible pump is engineered for efficient clean water transfer, making it an ideal choice for irrigation, drainage, and water circulation tasks. It features a robust design with a versatile flow rate that can be adjusted continuously to match specific operational needs. Equipped with a reliable float switch for automated on/off functionality, this unit ensures seamless performance and protection against dry running.

Key Features

Core Functionalities

- Continuously adjustable flow rate
- Automated float switch control
- Vertical pump outlet configuration
- Integrated clamp for container edge fastening

Installation and Design

Design Details

Feature	Configuration
Pump Orientation	Vertical
Adjustability	Continuously variable flow
Operation	Automatic

Included Components

3 Riser Pipe Elements, Edge-Mount Clamp, Float Switch
