

Clutch Booster for Enhanced Actuation

This clutch booster enhances assistance in clutch actuation for improved vehicle control. The device amplifies the force applied to the clutch pedal, making it easier to engage and disengage the clutch.

Product Overview

Clutch Booster for Enhanced Actuation

This clutch booster is engineered to provide significant assistance in clutch actuation, effectively reducing driver effort and enhancing overall vehicle control. By amplifying the force applied to the clutch pedal, this device facilitates smoother engagement and disengagement, making it ideal for heavy-duty applications. Designed for durability and consistent performance, it integrates seamlessly with existing hydraulic or air brake systems to ensure long-lasting reliability and improved driver comfort.

Technical Specifications

Model Number	HF-6024
Part Identifier	DQ040100-100
Compatible Engine Sizes	4L, 5L, 6L, 8L
Production Reference Date	2012.05.08

Features

Key Benefits

- Reduces clutch pedal effort
- Improves vehicle control
- Compatible with hydraulic and pneumatic systems
- Engineered for heavy-duty durability
