

# Clutch Disc - Sprung Hub, High-Friction Material

This clutch disc is designed for optimal power transfer and durability. It features a sprung hub to dampen torsional vibrations, minimizing noise and extending component life.

## Product Overview

### High-Performance Clutch Solution

This high-performance clutch disc is engineered for optimal power transfer and long-term durability. It features a robust construction utilizing high-friction material to enhance grip and significantly reduce slippage. Designed with a sprung hub, the unit effectively dampens torsional vibrations, which minimizes operational noise and extends the overall lifespan of the drivetrain components.

## Technical Specifications

Hub Design	Sprung Hub
Friction Material Type	High-Friction

## Performance Features

### Key Performance Benefits

- Enhanced grip
- Reduced slippage
- Torsional vibration dampening
- Noise reduction
- Extended component life

Application	High-Performance, Automotive Drivetrain
