

Clutch Pressure Plate

The clutch pressure plate applies pressure to the clutch disc, engaging or disengaging the engine from the transmission. It is designed to withstand high temperatures and pressures for smooth and efficient gear changes.

Product Overview

High-Performance Clutch Pressure Plate

This clutch pressure plate, also known as a clutch cover, serves as a critical component in manual transmission systems. Designed for durability, it effectively applies pressure to the clutch disc to engage or disengage the engine from the transmission. Its robust metal construction and integrated diaphragm spring mechanism ensure reliable power transfer and smooth gear changes for various truck applications.

Technical Details

Design Features

- Diaphragm spring mechanism
- Integrated release levers
- Ventilation slots for heat dissipation
- Multiple mounting points

Part Reference	MFC500
Construction Materials	Cast Iron, Steel

Compatibility

Compatible Makes

Isuzu • Mitsubishi

Vehicle Type	Truck
