

Clutch Release Bearing and Belt Tensioner

This component is engineered for smooth clutch operation. It maintains precise belt tension in automotive applications.

Product Overview

High-Performance Automotive Drivetrain Components

This range of high-performance components includes clutch release bearings, hydraulic release bearings, and belt tensioners engineered for optimal vehicle performance and longevity. Designed for demanding automotive environments, these parts support smooth clutch operation and precise belt tensioning in various vehicle types, including trucks and buses. Each component is manufactured to rigorous quality standards to ensure reliable power transmission and durability.

Technical Standards

Performance Testing

100000 km

Tensioner Fatigue Test

1000000 cycles

Clutch Bearing Fatigue Test

Certifications

ISO/TS16949:2016, IATF 16949:2016

Product Range

Component Types

- Clutch release bearing
- Hydraulic release bearing
- Timing belt tensioner
- Motor belt tensioner
- Air-conditioning belt tensioner
- Tensioner lever V-ribbed belt
- Idler pulley
- Central slave cylinder

Market Reach

Global Distribution

Europe • South America • Southeastern Asia • Africa • Hong Kong • Macau
