

# CNC Aluminum Profile Milling and Machining Center

This CNC milling machine is designed for high-speed aluminum profile milling, drilling, and machining. It offers precise control and efficient material processing, suitable for various aluminum profile applications.

## Overview

### High-Efficiency CNC Processing Center

This industrial CNC machining center is engineered specifically for the precision milling and drilling of aluminum profiles. Designed for high-speed operation, it provides the accuracy and control required for demanding door, window, and curtain wall manufacturing applications. The robust architecture ensures consistent material processing, helping professionals streamline their production workflows.

## Machine Details

### Core Machining Capabilities

- High-speed milling
- Precision drilling
- General profile machining

### Available Models

LZX-CNC-3500, LZX-CNC-3200, LZX-CNC-2500

## Application

### Primary Applications

Industrial Profiles • Window Manufacturing • Door Manufacturing • Curtain Wall Production
