

CNC Cylindrical Grinder

The CNC cylindrical grinder is designed for precision grinding of cylindrical parts. Its automated CNC programming ensures consistent and accurate results across various materials and applications.

Overview

Precision Cylindrical Grinding

The RSM500 is a high-precision CNC cylindrical grinder engineered for consistent and accurate manufacturing. Featuring a sophisticated programmable control system with a digital interface, it simplifies the setup and monitoring of complex grinding parameters. This automated solution is ideal for producing cylindrical components to tight tolerances across diverse material applications in both general manufacturing and toolmaking.

Technical Specifications

Automation

Fully Automated • CNC Programmed

Control System

Programmable CNC with digital display

Model Identifier

RSM500

Safety & Compliance

Safety Equipment

- Protective enclosure
- Emergency stop buttons
