

CNC Hydraulic Press Brake

This CNC hydraulic press brake provides an economical solution for metal forming. It features a CNC control system for automated operation and a robust hydraulic system for precise bending.

Product Overview

Professional Metal Forming Solution

The WC67Y series hydraulic bending machine is an economical and reliable solution designed for high-precision metal forming tasks. It features a dedicated CNC control system for duplex-axis operation, ensuring repeatable results for bending, folding, and straightening operations. Equipped with high-quality components like imported ball screws and linear guides, it provides the accuracy and stability required for professional metalworking environments.

Technical Specifications

System Type	WC67Y Hydraulic Bending Machine
CNC Control System	Economical duplex-axis control

Components & Build

Backgauge Components

- Imported ball screw
- Linear guide

Key Features

Core Functions	Bending, Folding, Straightening, Leveling
----------------	---
