

CNC Lathe

This CNC lathe is a precision machine tool used for metalworking, offering capabilities such as cutting, facing, and threading. Its robust construction and digital display ensure accurate control and repeatability in producing components.

Overview

Precision Engineering CNC Lathe

This CNC lathe is a precision machine tool engineered for high-accuracy metalworking applications. Featuring a robust, fully enclosed working area, it ensures operator safety while maintaining consistent performance. The integrated digital display allows for precise monitoring of machining processes, making it an ideal solution for complex turning operations including cutting, facing, and threading.

Technical Specifications

Safety Features

Fully Enclosed Working Area

Model Number	CK6130
Machining Capabilities	Cutting, Facing, Threading, Turning
Control System	Digital Display Interface
