

CNC Lathe

This CNC lathe is a precision machine tool used for metalworking. It is designed for accuracy and efficiency in turning, facing, and threading.

Overview

Precision CNC Lathe

This CNC lathe is a high-precision machine tool engineered for efficient metalworking and material removal tasks. With a robust, fully enclosed design, it ensures operational safety and a clean working environment. It features an intuitive digital control panel, making it an ideal solution for turning, facing, and threading operations in small to medium-sized production environments.

Technical Details

Design Features

Fully Enclosed • Digital Control Panel • High Accuracy

Model Number	CK6130
Machining Capabilities	Turning, Facing, Threading
