

# CNC Lathe

This CNC lathe is a precision machine tool used for metalworking. It is designed for turning, facing, and threading operations on metal workpieces.

## Overview

### Professional CNC Lathe Performance

The CK6130 is a high-precision CNC lathe engineered for versatile metalworking applications, including turning, facing, and threading. Featuring a robust, fully enclosed design, this machine prioritizes operator safety while maintaining structural rigidity for consistent performance. The integrated control panel and digital display allow for intuitive programming and real-time monitoring of complex machining operations.

## Key Features

Model Identifier	CK6130
Primary Applications	Turning, Facing, Threading, Metalworking

## Safety & Design

### User Interface

- Integrated control panel
- Digital display screen
- Real-time operation monitoring

Safety Enclosure	Yes
