

CNC Machined Production Parts

These precision-engineered metal components are manufactured using CNC machining processes. The production parts are suitable for custom designs and mass production, ensuring consistent quality and performance.

Overview

High-Precision CNC Machining & Fabrication

We provide comprehensive CNC machining and sheet metal fabrication services tailored for diverse industrial applications. Our capabilities include laser cutting, precision bending, and robotic welding to ensure consistent quality for both custom designs and mass production. With a focus on durability and precision, these components are engineered to meet the rigorous standards of sectors such as automotive, logistics, and HVAC.

Manufacturing Capabilities

Production Equipment

- Laser Cutting Machines
- Flame Cutting Machines
- Bending Machines (8T, 80T, 150T)
- Punching Machines (35T, 45T)
- Welding Robots
- Hydraulic Press (200A)
- 4ASS Milling Machines
- Shear Machines

Core Processing Services

Sheet Metal Processing, Laser Cutting, Flame Cutting, Plasma Cutting, Mechanical Processing, Riveting Welding, CNC Machining

Production Capacity

Facility & Output

6500 sqm

Factory Area

4 M USD

Annual Output Value

Applications

Target Industries

Auto Parts • Forklift Accessories • Air Conditioning Accessories • Elevator Parts • Industrial Machinery

Technical Details

Key Features

- Precise dimensions and cutouts
- Integrated mounting holes
- High-strength durable materials
- Consistent quality for mass production
- Custom design compatibility
