

CNC Metalworking Lathe

This CNC lathe is designed for precision metal machining operations. It features a rigid structure for enhanced stability and accuracy during high-speed cutting.

Overview

Precision CNC Metalworking Lathe

This CNC lathe is engineered for high-precision metal machining operations, featuring a rigid structure designed for enhanced stability and accuracy during high-speed cutting. Equipped with a user-friendly CNC control system, it facilitates efficient programming and operation for professional workshops. Its compact design ensures versatility for various turning applications, including threading, grooving, and contouring, while maintaining high performance.

Key Features

Model Number	CK6136
Turning Applications	Threading, Grooving, Contouring

Technical Specifications

Core Components

- Robust Spindle
- High-precision Ball Screw
- Automatic Lubrication System

Performance Metrics

1 Rigid
Structure Type
