

# CNC Plasma and Flame Cutting Machine

This CNC plasma and flame cutting machine is designed for versatile metal fabrication. It features a robust frame, advanced CNC control system, and automatic torch height control for consistent cutting performance.

## Overview

### Versatile CNC Cutting Solution

This high-precision CNC plasma and flame cutting machine is engineered for versatile metal fabrication across a wide range of industrial applications. It features a robust frame and an advanced CNC control system that ensures consistent cutting performance and reliability. With the ability to handle various metal types and thicknesses using dual cutting technologies, it offers a flexible solution for complex production needs.

## Key Performance Metrics

### Performance Highlights

**2 Plasma/Flame**

Cutting Modes

## Technical Features

### Advanced Components

- Robust structural frame
- Advanced CNC control system
- Automatic torch height control (THC)
- Integrated nesting and programming software

### Cutting Technologies

Plasma Cutting, Flame Cutting, CNC Control, Automatic Torch Height Control

## Safety & Operation

### Safety Systems

Emergency Stop • Enclosed Cutting Area

### Operational Efficiency

- User-friendly software interface
- Automated height adjustment for consistent quality
- Multi-material thickness handling
