

CNC Single Column Vertical Turning Lathe

This vertical turning lathe is a CNC machine designed with a single column. It is built for machining large and heavy workpieces with high precision.

Product Overview

High-Performance Vertical Turning

The YM-CKG125 is a high-speed CNC Single Column Vertical Turning Lathe engineered for the precise and efficient machining of large and heavy workpieces. Built with a robust structure, it provides exceptional rigidity and stability throughout intense turning operations. This machine is an ideal solution for demanding sectors such as aerospace, automotive, and energy, ensuring reliable performance and high precision output.

Key Features

Machine Capabilities

High-Speed Spindle, CNC Control, Automatic Tool Changer, Heavy-Duty Machining

Industry Applications

Suitable Industries

- Aerospace
- Automotive
- Energy

Design Specifications

Structural Details

Single Column Structure • High Rigidity • High Stability
