

CNC Tool ER Clamping Nut

Precision-engineered ER nut designed for CNC tooling applications. This clamping nut ensures secure and accurate tool holding, contributing to enhanced machining performance.

Product Overview

Precision CNC Clamping Solutions

This precision-engineered ER clamping nut is designed for demanding CNC tooling applications. Constructed from high-grade materials, it ensures secure and accurate tool holding, significantly contributing to enhanced machining performance and longevity. The design is fully compatible with standard ER collet systems, making it a versatile choice for milling, drilling, and various other CNC machining processes.

Technical Specifications

System Compatibility

ER Collet Systems

Model Type

ER32-UM

Suitable Applications

Milling, Drilling, CNC Machining

Material Grade

High-grade industrial steel
