

CNC Turning Machine

This CNC turning machine is designed for precision machining operations. It features a programmable controller for automated machining processes, ensuring high precision and efficiency.

Overview

Precision CNC Turning Solution

The CKJ6132 is a high-performance numerical control turning machine engineered for precision machining operations. Its robust construction ensures exceptional stability and accuracy during complex tasks like threading, facing, and contouring. Equipped with a programmable controller, this machine streamlines automated manufacturing processes to boost efficiency and output quality.

Technical Specifications

| | |
|--------------|-----------------------------------|
| Model Number | CKJ6132 |
| Machine Type | Numerical Control Turning Machine |

Key Features

Safety & Control Features

- Programmable controller for automation
- User-friendly control panel
- Protective safety enclosure

| | |
|------------------------|--|
| Machining Capabilities | Threading, Facing, Contouring, Automated Machining |
|------------------------|--|

Performance Metrics

Performance Highlights

| | |
|----------------------------------|-----------------------------|
| 1 High Precision Level | 1 High Efficiency |
|----------------------------------|-----------------------------|
