

CNC Vertical Machining Center

This vertical machining center is designed for milling, drilling, tapping, and boring operations. It features a rigid frame, high-speed spindle, and multi-axis CNC control.

Product Overview

High-Precision Vertical Machining Center

This vertical machining center is engineered for demanding milling, drilling, tapping, and boring operations across a diverse range of industrial materials. It features a robust cast iron frame that ensures superior stability and vibration damping during high-speed cutting. Equipped with an advanced multi-axis CNC control system and an automatic tool changer, it provides the precision and productivity required for complex part manufacturing in sectors like aerospace and automotive.

Technical Features

Supported Operations	Milling, Drilling, Tapping, Boring
Frame Material	Cast Iron

Performance Metrics

Key Metrics

1 High-Speed
Spindle Type

Automation

- Multi-axis CNC control system
- Automatic tool changer
- Coolant system for thermal stability

Applications

Target Industries

Aerospace • Automotive • General Manufacturing
