

# CNC Vertical Turning and Milling Center

The CNC vertical turning and milling center is designed for machining large, complex parts with precision. Its features include a high-speed spindle, multi-axis machining capabilities, and automated tool selection.

## Overview

### Precision Machining Capability

The CXX500 is a CNC vertical turning and milling center engineered for the high-precision machining of large and complex components. It integrates a robust structural design with a high-speed spindle and an advanced CNC control system to deliver efficient, accurate material removal. Equipped with a rotary table for multi-axis capabilities and an automated tool changer, this machine is optimized for demanding applications in the aerospace, automotive, and energy sectors.

## Key Features

### Core Capabilities

- Vertical turning
- Milling
- Multi-axis machining
- Automated tool selection

### Suitable Industries

Aerospace, Automotive, Energy

## Technical Specifications

### Design Highlights

Robust Structure • High-Speed Spindle • Rotary Table Included
