

CNC Vertical Turning and Milling Center CXK320

The CNC vertical turning and milling center is designed for high-precision machining of large and complex parts. It features a rigid structure, high-speed spindle, and versatile tool changer for efficient and accurate operations.

Overview

Precision Machining Center

The CXK320 is a high-performance CNC vertical turning and milling center engineered for the precise machining of large and complex components. Its robust, rigid structure combined with a high-speed spindle and versatile tool changer ensures superior accuracy across turning, milling, drilling, and tapping operations. Designed for efficiency, this machine integrates an advanced CNC control system that simplifies programming and operation, making it an ideal solution for demanding applications in the aerospace and automotive sectors.

Machining Capabilities

Supported Operations

Turning, Milling, Drilling, Tapping

Key Features

Machine Highlights

- Rigid structural design for stability
- High-speed spindle assembly
- Versatile automatic tool changer
- Advanced CNC control system

Industry Applications

Target Industries

Aerospace • Automotive • General Manufacturing
