

Coal Mill with Electric Dust Collector

This coal mill pulverizes coal while controlling particulate emissions. The integrated system features a mill and electric dust collector for reliable coal processing and emission management.

Overview

Industrial Coal Milling Solution

This robust coal mill is engineered for efficient coal pulverization in demanding industrial environments such as power plants. It features an integrated electric dust collector system, ensuring effective particulate emission control and environmental compliance. The system is designed for reliability and ease of maintenance, complete with elevated support structures and integrated access platforms.

System Architecture

Primary Components

- Enclosed Coal Mill Structure
- Electric Dust Collector
- Support Framework
- Gas and Particulate Ductwork
- Access Stairways and Platforms

System Type

Integrated Coal Mill and Dust Collection System

Compliance & Features

Environmental Compliance

Particulate Emission Control • Dust Capture System

Suitable Applications

Power Plants, Industrial Processing, Coal Pulverization
