

Coal Preparation Plant for Impurity Removal

This coal preparation plant processes raw coal to remove impurities. It features washing, sorting, and sizing equipment for efficient, large-scale refinement.

Overview

Industrial Coal Preparation Plant

This large-scale coal preparation plant is designed for the efficient processing of raw coal to remove impurities. It integrates advanced washing, sorting, and sizing stages to ensure high-quality output suitable for industrial use. The facility features robust infrastructure to support continuous material handling and transportation.

Technical Specifications

Processing Capacity

24 t/h

Hourly Throughput

Core Processing Stages

- Coal Washing
- Material Sorting
- Sizing and Grading
- Impurity Removal

Infrastructure

Key Facility Features

Material Handling Systems, Railway Integration, Storage Towers, Industrial Scale Design
