

# Coaxial Communication Cable

Coaxial cable is engineered for transmitting high-frequency electrical signals. It is suitable for cable television, internet, and radio communication systems.

## Product Overview

### High-Performance Coaxial Solution

This coaxial communication cable is engineered for reliable, high-frequency signal transmission. Featuring a robust construction with a central copper conductor, dielectric insulator, and braided metallic shielding, it ensures minimal signal loss during operation. It is an ideal choice for professional applications in cable television, internet infrastructure, and radio communication systems.

## Technical Specifications

Conductor Material	Copper
Shielding	Braided metallic shield
Insulation	Dielectric insulator

## Applications

Primary Applications	Cable Television, Internet Infrastructure, Radio Communication
