

Coaxial Communication Cable

Coaxial cable designed for high-frequency signal transmission. It features a central conductor, dielectric insulation, braided shielding, and a protective outer jacket.

Product Overview

High-Performance Coaxial Connectivity

This coaxial communication cable is engineered for reliable, high-frequency signal transmission in professional communication systems. Its robust construction includes a central conductor, specialized dielectric insulation, and braided shielding to minimize interference. Designed for durability and signal integrity, it serves as a dependable solution for connecting critical networking and communication devices.

Technical Specifications

Construction Features

- Central conductor
- Dielectric insulation
- Braided shielding
- Protective outer jacket

Cable Type	Coaxial
Primary Applications	High-frequency transmission, Communication systems, Device connectivity
