

Coaxial RF Circulator

This is a coaxial RF circulator designed for microwave and RF communication systems. It features coaxial connectors and a mechanical adjustment mechanism.

Overview

High-Performance Coaxial RF Circulator

This coaxial RF circulator is a precision-engineered component designed for microwave and RF communication systems. It facilitates signal routing and protection by ensuring unidirectional signal flow, effectively isolating sensitive equipment from reflected power. Built for demanding environments, this unit offers robust mechanical reliability and consistent performance across its designated frequency range.

Technical Specifications

Component Type	Coaxial RF Circulator
Interface	Coaxial Connector
Adjustment Mechanism	Yes

Compliance & Standards

Certifications	RoHS Compliant, CE Certified
