

Coaxial Signal Transmission Cable

Coaxial cable designed for signal transmission. It features a central conductor surrounded by insulation, a metallic shield, and an outer jacket for connecting devices in communication systems.

Overview

High-Performance Signal Transmission

This coaxial signal transmission cable is engineered for reliable connectivity in complex communication systems. Featuring a robust design with a central conductor, specialized insulation, and a protective metallic shield, it ensures minimal signal interference. It is built to meet established industry standards for signal integrity and durability in professional environments.

Technical Specifications

Industry Standards	JIS, C3501
Cable Type	Coaxial Cable
Primary Application	Signal transmission in communication systems

Construction

Cable Composition

- Central Conductor
- Insulation Layer
- Metallic Shield
- Outer Protective Jacket
