

Coaxial Signal Transmission Cable

Coaxial cable designed for signal transmission, featuring a central conductor surrounded by insulation and a braided shield. It is suitable for communication applications requiring reliable signal integrity.

Overview

Reliable Signal Transmission

This coaxial cable is engineered for high-performance signal transmission across diverse communication networks. It features a robust central conductor protected by high-quality insulation, ensuring minimal signal loss. With a specialized braided shield, the cable provides exceptional protection against electromagnetic interference, making it an ideal choice for demanding industrial and commercial applications.

Technical Construction

Cable Composition

- Central conductor for signal path
- Insulation layer
- Braided shield for interference protection
- Outer protective jacket

Shielding

Braided Shield

Application

Primary Applications

Signal Transmission, Communication Networks, Industrial Data, Commercial Infrastructure
