

Coaxial Speaker with Integrated Tweeter and Woofer

This coaxial speaker integrates a tweeter and woofer into a single unit for precise sound alignment and phase coherence. Its advanced cone material and integrated crossover network contribute to accurate and balanced sound reproduction, making it ideal for audiophiles and professional audio applications.

Overview

High-Performance Coaxial Audio Driver

The 10CH Series Coaxial speaker is engineered for exceptional sound reproduction in professional audio applications. By integrating a tweeter and woofer into a single coaxial unit, it ensures precise phase coherence and alignment for a balanced listening experience. Its rigid frame construction minimizes distortion, while advanced cone materials deliver accurate, detailed sound across the entire frequency spectrum.

Technical Features

Key Performance Benefits

- Precise phase coherence
- Reduced distortion
- Balanced signal distribution
- Accurate frequency response

Speaker Configuration	Coaxial (Integrated Tweeter and Woofer)
Construction	Rigid Frame, Integrated Crossover

Applications

Recommended Applications

Audiophile Systems • Professional Audio • Studio Monitoring
