

# Coking Material

Coking material is a dark, granular substance with variations in size and surface appearance. It is commonly used in industrial processes due to its dense and compact arrangement.

## Product Overview

### Industrial Coking Material

This coking material is designed for high-performance industrial applications, characterized by its dense, granular composition. The material consists of small, irregularly shaped particles, ensuring a compact arrangement suitable for demanding thermal or chemical processes. Its physical structure is optimized for consistent performance in industrial environments.

## Physical Characteristics

### Appearance

Dark • Granular

### Texture

Dark, granular, and dense

### Particle Form

Small, Irregularly shaped, Compact
