

Cold Shrink Indoor Cable Termination Kit

This cold shrink kit is designed for terminating high voltage cables indoors. It provides insulation and protection against environmental factors, and it does not require heat or special tools for installation.

Product Overview

Professional Indoor Cable Termination

This cold shrink 1-core indoor termination kit is engineered for reliable high-voltage cable termination in indoor environments. Its advanced cold shrink design allows for rapid, tool-free installation without the need for heat, ensuring safety and efficiency. The kit provides robust insulation and protection against environmental factors, making it an ideal solution for demanding industrial electrical infrastructure.

Technical Specifications

Key Features

- Heat-free installation
- Excellent environmental protection
- High voltage insulation
- Complete kit components

Installation Method	Cold Shrink (No heat required)
Core Configuration	1-Core
Application Environment	Indoor, Industrial
