

# Cold Slurry Patcher for Road Repair

The cold slurry patcher is engineered to repair road damages, including potholes and pits. It enhances road flatness and improves traveling comfort for safer transportation conditions.

## Overview

### Road Maintenance Solution

The HGY5120DYH Cold Slurry Patcher is a specialized, mobile unit designed for efficient road maintenance and repair. By integrating a mixing unit, material storage, and a precise dispensing system onto a robust truck chassis, it streamlines the process of patching potholes and cracks. This equipment ensures uniform distribution of slurry mixtures, offering adjustable mixing ratios and variable application rates to improve operational efficiency and repair durability.

## Technical Specifications

Engine Power	140 kW
Chassis Model	ZZ1124G4215D1

## Capacity & Performance

### Max Discharging Rate

**1200 kg/min**  
Mixer Output

Aggregates Hopper Volume	5 m3
Emulsion Tank Volume	1.2 m3
Water Tank Volume	1.2 m3
Cement Tank Volume	0.5 m3

## Equipment Details

Product Model	HGY5120DYH
