

Combination Joint Fitting for Industrial Machinery

This fitting is designed for connecting different components in pneumatic systems. Its robust construction ensures reliable performance in demanding industrial environments.

Product Overview

Industrial Combination Joint Fitting

This combination joint fitting is engineered for robust performance in demanding industrial machinery environments. Designed with a durable black body and distinct teal accents, it facilitates secure connections between various system components. Its versatile geometry supports both curved and linear assembly configurations, making it a reliable choice for complex mechanical systems.

Technical Specifications

Design Features

- Curved and linear integration
- Reinforced fastener points
- High-contrast color scheme

Part Number / ID	K-120000000000
Construction	Robust, Industrial Grade, Multi-component Assembly
