

# Combination Lathe and Milling Machine

This versatile machine combines lathe and milling functions for precision metalworking. Its robust design and variable speed control make it suitable for small workshops, model making, and educational applications.

## Overview

### Versatile Precision Machining

This combination lathe and milling machine is engineered for precision metalworking, seamlessly integrating turning and milling capabilities into a single unit. Its robust construction ensures stability during operation, while the compact footprint makes it an ideal solution for workshops with limited space. Designed for small-scale manufacturing, model making, and educational environments, this machine provides a cost-effective, multi-functional tool for diverse machining tasks.

## Technical Features

### Design Highlights

- Robust construction for durability
- Compact footprint for small workshops
- Integrated lathe and mill functions

### Key Capabilities

Turning, Milling, Shaping, Cutting, Variable Speed Control

## Applications

### Suitable For

Small-scale manufacturing • Model making • Educational purposes
