

# Combination Network Cable with Shielded and Unshielded Pairs

This combination network cable incorporates multiple internal conductors for diverse communication purposes. It features shielded and unshielded twisted pairs, coaxial elements, and power conductors to support complex installations.

## Product Overview

### Versatile Hybrid Networking Solution

This combination network cable is engineered to support complex installations by integrating multiple communication and power transmission elements into a single jacket. Featuring a sophisticated mix of shielded and unshielded twisted pairs alongside coaxial and power conductors, it provides a comprehensive solution for diverse networking environments. Designed for professionals, this cable streamlines installation by reducing the need for multiple cable runs while maintaining signal integrity.

## Technical Construction

### Internal Components

- Shielded twisted pairs
- Unshielded twisted pairs
- Coaxial elements
- Power conductors

### Application Suitability

Complex Networking, Power Transmission, Multi-functional Communication
