

# Combine Harvesters

These combine harvesters are used for efficient harvesting operations. They are suitable for use in fields of ripe grain.

## Overview

### High-Efficiency Harvesting

These combine harvesters are engineered for large-scale agricultural operations, designed to maximize throughput and crop yield efficiency. Built to handle diverse grain types, they offer robust performance in demanding field conditions. Their advanced harvesting mechanisms ensure minimal grain loss and optimized field coverage, making them an essential asset for professional farming enterprises.

## Key Performance Metrics

### Operational Efficiency

**98 %**

Harvesting Efficiency

**15 km/h**

Field Speed

## Technical Specifications

### Operational Status

Field Ready • Heavy Duty

<b>Machine Type</b>	Combine Harvester
<b>Suitable Crops</b>	Wheat, Barley, Rice, Corn
