

Combined Rice Milling Machine

This combined rice milling machine integrates cleaning, destoning, husking, separating, whitening and grading functions. Designed for efficient and high-quality rice production, the machine features a compact structure and easy operation.

Product Overview

Comprehensive Rice Processing Solution

The Combined Rice Milling Machine is a versatile, all-in-one processing unit designed for efficient, high-quality rice production. It seamlessly integrates essential functions including cleaning, destoning, husking, separating, whitening, and grading within a single, compact system. Engineered for small to medium-scale operations, this unit minimizes broken rice rates while maximizing yield, offering a durable and low-maintenance solution for modern rice milling needs.

Technical Capabilities

Integrated Functions

- Cleaning
- Destoning
- Husking
- Separating
- Whitening
- Grading

System Components

Feeding Hopper, Vibrating Sieve, Destoner, Rubber Roller Husker, Paddy Separator, Rice Whitener, Grading Sieve

Performance Metrics

Key Performance Benefits

Low Power Consumption • High Yield • Minimal Broken Rice • Compact Structure

Operational Details

Ideal Scale

Small to medium-scale rice mills

Customization Available

Yes
