

Combined Rice Milling Machine

The combined rice milling machine is a compact and efficient machine designed for processing rice. It integrates multiple functions including husking, polishing, and grading into a single unit, streamlining the rice milling process.

Overview

Combined Rice Milling Machine

This combined rice milling machine is a compact and efficient solution designed for streamlining the rice processing workflow. It integrates essential functions into a single unit, making it an ideal choice for operations looking to improve throughput while minimizing grain breakage. Built for durability and performance, this equipment ensures high-quality output for small to medium-scale milling requirements.

Performance Metrics

Output Capacity

550 kg/h
Output

Winnowed Paddy Ratio

70 %

Technical Specifications

Support Power

11 KW

Main Spindle Speed

900 r/min

Physical Dimensions

Weight

275 kg

Dimensions (LxWxH)

1300 x 900 x 1400 mm
