

Combined Rice Milling Machine with Separation Sieve

This combined machine efficiently mills rice and separates impurities in a single process. Designed for agricultural use, it streamlines the primary processing of rice.

Product Overview

Combined Rice Milling Solution

This combined rice milling machine is a specialized, patented unit designed for efficient primary agricultural processing. It integrates a milling function with a separation sieve to effectively remove impurities and deliver high-quality rice. Built for durability and ease of use, it is an ideal solution for small to medium-scale rice processing operations.

Key Features

Core Features

- Patented design for simplified assembly and operation
- Integrated separation sieve for impurity removal
- Fire quenched stainless steel sieve for enhanced durability
- High-frequency fire quenched roller for top-class rigidity
- Fully assembled upon factory departure

Technical Standards

Certifications

ISO 9001

Operational Safety

Safety Warnings

- Do not feed hands or hard materials into the machine
- Turn off power before performing adjustments
- Adjust milling handle to achieve desired rice quality
