

Commercial Air Source Heat Pump

This commercial air source heat pump provides efficient heating and cooling for commercial spaces. It is designed for energy efficiency, offering cost savings on heating and cooling bills.

Overview

Efficient Climate Control

This commercial air source heat pump provides a highly efficient and reliable solution for both heating and cooling large spaces. Engineered for durability and optimal energy efficiency, the unit helps reduce operational costs significantly. Its robust construction and compact design ensure long-lasting performance and straightforward installation in various commercial environments.

Technical Features

Monitoring System	High Pressure Meter, Low Pressure Meter
Maintenance	Manual vent included for ease of service

Connections

Water Connections

- Water Inlet
- Water Outlet
