

Commercial Air Source Heat Pump for Climate Control

This commercial air source heat pump is designed for heating and cooling large spaces. The unit features robust construction, an advanced control system, and environmentally friendly refrigerant.

Product Overview

High-Efficiency Climate Control

This commercial air source heat pump is engineered for high-performance heating and cooling in large-scale industrial and commercial environments. Built with robust materials and an advanced control system, it ensures reliable operation and energy-efficient climate management. The unit utilizes environmentally friendly refrigerant to support sustainable facility operations while maintaining consistent temperature control.

Technical Specifications

Key Features

- Advanced control system
- Robust construction
- Environmentally friendly refrigerant
- Heating and cooling capability

Performance Highlights

1 Dual-Mode

Heating & Cooling

Application

Industrial, Commercial, HVAC
