

Commercial Heat Pump Water Heater

This commercial heat pump water heater is designed for efficient water heating. The system is designed for outdoor installation and includes multiple water inlet/outlet ports for connection to existing plumbing.

Product Overview

High-Efficiency Commercial Water Heating

This commercial heat pump water heater is engineered for reliable, energy-efficient hot water production in demanding commercial environments. Featuring a robust, weather-resistant enclosure, the unit is designed for outdoor installation and long-term durability. It includes integrated monitoring systems such as pressure gauges and accessible maintenance panels to ensure consistent performance and ease of service.

Design & Construction

Installation Type	Outdoor
Enclosure Features	Weather-resistant, Multiple access panels, Protective grille

System Components

Monitoring Systems

- Integrated pressure gauges
- Large heat exchanger

Plumbing Connections	Multiple water inlet/outlet ports
